

Bolete Chair

Patricia Urquiola

This new chair, designed by Patricia Urquiola, also has the ability to transform environments, whether public or private, providing a unique and original character with an unmistakable image that surprises with its organic shapes and sculptural base.

Bold and comfortable, the central base is distinguished by its organic shape and expressive grooved texture, giving it an original personality.

The upholstery work is carried out on an internal shell that is made of Pure ECO® thermopolymer, made from 100% recycled materials and fully recyclable and reusable.

Ergonomics is a key feature of this chair, thanks to the distinctive geometry of its seat and its generous width, which offers optimal support for various morphologies and sitting postures.

The innovative construction system and its neat upholstery with enveloping cover stand out for their focus on circularity, simplifying the manufacturing process and the possibility of complete disassembly and recycling of materials.
